Personal Emergency Alarm - LWA SOS

INSTRUCTIONS

The LWA SOS (pictured below) has (3) three LED indicator's with buttons below them.

The left hand LED is **Amber** and indicates GSM (Mobile phone network) connectivity.
The button (Call button # 2) is used as a speed dial function for quick and easy 2-way communications with :

Simply push any button on the top briefly to hang up the call when finished

The centre LED is **Red** and indicates power & activity

The centre button (SOS) is used to activate, silent **Red Alert** alarm

(this produces SMS containing, last known GPS location, speed, battery life, time & date + generates a silent telephone call, through to the

Incident Response Centre (IRC) , enabling experienced staff to monitor your location and act accordingly to your emergency. .

Note: The user cannot finalise this emergency **RED** alert call, the operator will stay online until they Know the client is safe and well...

The right hand LED is **Blue** and indicates GPS signal is currently being received

The button (Call button # 1) is used as a speed dial function for quick and easy 2-way communications with :

Simply push any button on the top briefly to hang up the call when finished

Right hand side of the unit is the ON / OFF and Status button.

ON = Simply press and hold the button until all 3 lights start to flash

Release the button (unit will now configure itself)

In approximately 45 seconds the lights will start to flash in a regular sequence, indicating status as described above.

Unit is now ready for use

Off = Simply press and hold the button until all 3 lights start to flash, release the button (unit will now turn OFF)

Audio speaker is located at the top right hand side

Microphone is located at the top left hand side

Just below microphone is the USB port for the charger.

Personal Emergency Alarm - LWA SOS

Care of Unit

The unit should either be on your person or on charge

- **Use of Charger:.** When not in use, the unit should be placed on charge.
When unit is on charge ALL functions are DISABLED
Use the charging tools provided (GPO/USB charger head + USB to mini USB lead).
 1. Plug mini USB into the side of the unit as described above
 2. Plug the USB lead into the GPO plug provided
 3. Plug the plug head into a suitable general power outlet
 4. Ensure outlet is turned ON and active(All LED's should flash for short period, then only RED & when fully charged all LED will go off – approx 4 hours from flat)

The above use, will ensure the unit is always at maximum charge and ready for use. .
When the unit is taken off the charger it is fully operational and will acquire its initial GPS position within a couple of minutes.

- **Handling:**
Whilst the unit is designed to withstand normal wear and tear, it is not waterproof.
It is as robust as your mobile phone. If it is immersed water for any period of time it will not function again.
- **SIM card:**
The SIM card is not suitable for any other device and is not to be removed from the unit under any circumstances.
